

The flexible rotary tables in the EDH series are also available as oversized heavy-duty rotary tables. They are also manufactured according to the proven EXPERT-TÜNKERS roller principle and enable dial plate diameters of over 2.000 mm with moving masses of up to 40 tons. The EXPERT-TÜNKERS design enables an extremely flat overall height even with these XXL dimensions. In addition, the cost-efficient ring design creates a large centre passage. This can not only be used to position work equipment, but also provides sufficient space to accommodate additional handling equipment or robots.

- Heavy-duty rotary table with flexible indexing and individually programmable servomotor
- Optimized motion profile of the servo motor-smooth and jerk-free motion sequence
- Optimized power transmission and emergency stop safety thanks to the multi-pin principle
- Large center passage due to flat ring design

Dimensions | *Rotary tables and trunnion drives*

EDH	Model	2050	2550	3250
[mm]				
TP	Ø outer diameter dial plate	1.800	2.300	3.000
M	Ø inner diameter dial plate	900	1.300	1.700
H	height	480	450	600
	Cam Follower Quantity	30	48	40
	weight*	3.100	4.000	6.800

* Weight inc. Drive – Deviations possible.
